ATA Group 29 - - Cage code C1861

HYDAC Technology GmbH in Germany produces the Hydraulic Accumulators used on the Airbus A318-321 family of aircraft. The part numbers are:

SB209L1A1-1480
SB209L1A1-1481
SB209L1A1-1483
SB209L1A1-1484

There are three in use on every aircraft – one for each of the hydraulic systems on board.

We are very pleased to announce that HYDAC Technology and their aftermarket support partner **asscom aeronautic support services** (Cage code D3520) have appointed Erie Aviation, Inc. as their exclusive fully authorized repair station for the Americas. EAI (Cage code **1B2T7**) has:

- Complete parts inventories for emergency requirements (AOG & CRIT orders)
- HYDAC-built dedicated test equipment
- Access to HYDAC's proprietary test and repair practices that go beyond the CMM
- Factory-trained technicians
- Authorization for factory warranty repairs

We look forward to working with you also on the Hydac products, and we'll always honor the official Airbus pricing for both parts and the repairs, whether a complete tear-down or only a bench-test for recertification purposes. We issue an 8130-3 for all repairs and can, if requested, also provide it with a dual release under EASA.

As you may know, Airbus named Erie Aviation their #1 repair station in North America for our on-time performance – both in 2004 and 2005. That's a great honor for an independent repair station, but we hope you already know from your own experience that you can trust EAI to provide great service at a competitive price.
